-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 January 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

Claims 18 and 19 are objected to because of the following informalities: In claim 18, line 4, "on" should be changed to --one--. Appropriate correction is required.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8, 18, 19, 24-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gellert (US Patent 4,771,164).

Gellert discloses an injection molding nozzle having an embedded electric heater wire 72 and a thermocouple 92 wrapped around said nozzle in a substantially downwardly spiral direction. The thermocouple and heater wire being separated by material 74 surrounding the wire, said material having good heat conductance. The thermocouple 92 and heater 72 being sandwiched in air and electrical insulating material 74 respectively. Embedding the thermocouple wire the entire length of the nozzle would have been obvious since it is known to embed the heater wire the entire length of the nozzle. See also In re Japikse, 86 USPQ 70 where a shift in location of parts when the operation of a device is not otherwise modified is considered within the skill of the ordinary artisan.

While the depth of penetration of the thermocouple is almost that of the heater wire, allowing for the same depth would have been obvious in light of In re Japikse, 86 USPQ 70 for reasons given supra. Winding the thermocouple around the nozzle a plurality of times would have been obvious in light of In re Rose, 105 USPQ 237 and IN
